Jumeoni

주머니 · Your pocket Korean adult.

Snap any Korean document. AI tells you what to do.

Hackathon submission · Business & Applications track
Date: 2026, Apr.26
Presenter: Farkhod Abdukodirov

It's a Tuesday.

You receive a letter.

서울특별시

자동차세 납부 고지서

납세자: JANE A SMITH
차량번호: 12가 3456

합계: ₩416,000
납부기한: 2026.12.31

You can read the letters.

But you don't know:

→ What kind of bill is this?

→ How urgent is it?

→ How do I actually pay it?

→ What happens if I'm late?

→ Is this even real, or a scam?

This happens to 2.7 million people.

Every week.

2.73M

foreign residents in South Korea (June 2025)

Up ~5% per year

1.0M

in their first 0–3 years — the wedge ICP

Survive daily life. Get destroyed by paperwork.

₩30k+

average single missed-deadline penalty

One avoided fine pays for years of Jumeoni.

~~Translation is solved.~~

Understanding isn't.

Papago / Naver Translate

"Automobile tax payment notice"

"Taxpayer: JANE A SMITH"

"Total: 416,000 won"

"Payment deadline: December 31, 2026"

→ Now what?

Jumeoni

What this is: Your semi-annual auto tax bill from Seoul. Real and legitimate.

What to do: Pay ₩416,000 by Dec 31. Open Toss → 세금 → scan bill.

If late: +3% penalty immediately, +0.75% per month after.

Reminder set: Dec 28, 9 AM ✓

How Jumeoni works

Three steps. Under five seconds.

1 → 2 → 3

Drop the document

Photo, screenshot, or PDF. Drag-and-drop, click-to-upload, or paste from clipboard.

AI reads and reasons

Claude vision identifies type, extracts deadlines and amounts, judges urgency, flags scams.

You get a plan

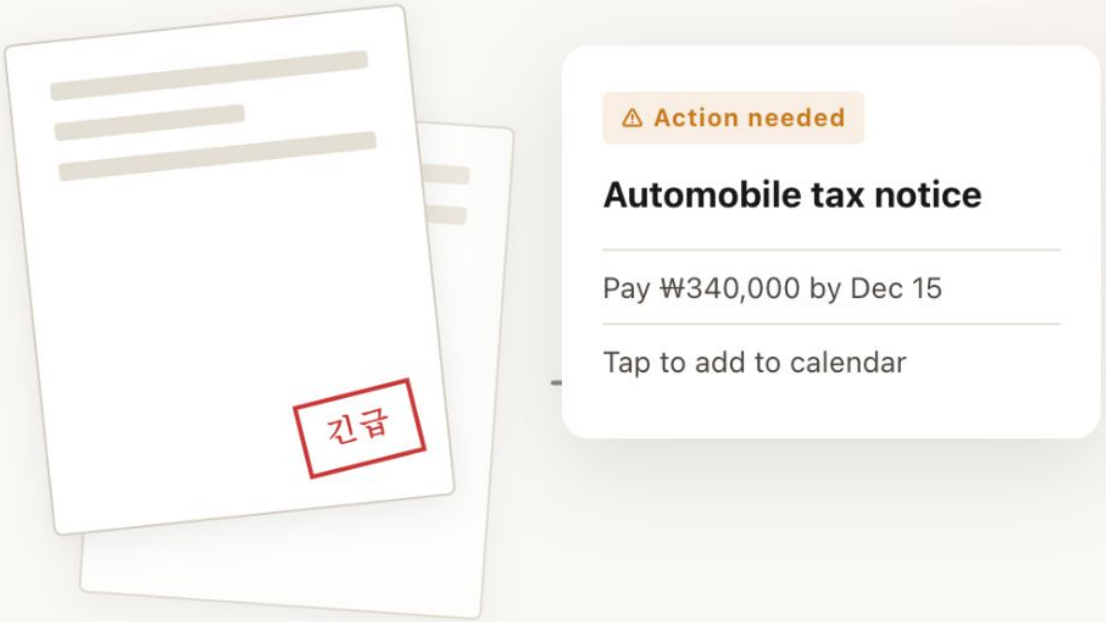
What it is. What to do. By when. Plus actions: add to calendar, draft a Korean reply, save.

It's a PWA. Installs to your home screen. Works on phone, tablet, desktop. No app store. No backend.

For the 2.7 million foreigners living in Korea

Your pocket *Korean adult.*

Snap any Korean bill, government notice, prescription, or contract. Jumeoni doesn't just translate it — it tells you **what it is**, **what you need to do**, and **by when**.



Try it now → | How it works | 📊 Pitch Deck

No signup. No data stored. Bring your own Gemini API key.

AI isn't a feature. It's the paradigm.

Jumeoni couldn't exist 18 months ago. Multimodal LLMs unlock 5 capabilities at once.

V Vision

OCR + layout understanding. Crumpled paper, screenshots, weird scans — all in one model.

C Classification

Government tax notice vs landlord message vs junk mail vs prescription. No labels needed.

E Extraction

Amounts, deadlines, account numbers, agency names — pulled into structured fields.

R Reasoning

Knows that auto tax in Korea has a 3% late penalty. Knows pharmacy 식후 30분 means 'after meals.'

G Generation

Drafts polite, honorific Korean replies to landlords. Tells you exactly what to do, in your language.

Live demo

Three pre-loaded samples. Two real failure cases foreigners actually hit weekly.

TAX NOTICE

Seoul auto tax

₩416,000 due Dec 31. Late = +3% penalty. Pay via Toss in 30 seconds.

PRESCRIPTION

Pharmacy meds

Antibiotic + painkiller. NO ALCOHOL warning. Drowsiness alert. Allergic reaction guidance.

LANDLORD KAKAO

Casual Korean message

Maintenance fee up ₩20k. Boiler tech visiting May 1 at 2pm. Pre-drafted polite reply included.

The magic moment: tap 'draft a Korean reply' → polite, honorific message ready to paste into Kakao.

How we make money

CONSUMER · Freemium

₩9,900 / month

(~$7 / month)

- ✓ Free tier: 5 scans/month
- ✓ Paid: unlimited + history + reply drafter
- ✓ One avoided fine pays for years
- ✓ Viral channel: foreigner FB groups (500k+)
- ✓ Affiliate revenue: Toss / Giro / banks

B2B · HR benefit

₩50,000 / employee / yr

Sold to companies hiring foreign workers

- → Universities, hagwons, factories in Ansan/Siheung
- → Korean gov pushing foreign labor — HR teams swamped
- → Reduces hand-holding by Korean colleagues
- → Pilot: 1 customer × 100 staff = ₩5M ARR
- → Easier sale than B2C — clear ROI

What protects this past launch

Data moat

Every scan trains a private taxonomy of Korean documents and 'what to do' templates. After 6 months, OpenAI's general models can't replicate without our data.

Distribution moat

First-mover in expat communities. r/livingInKorea, FB groups, Discord servers. Word-of-mouth in tight foreigner networks compounds.

Vertical depth

Generic 'snap and explain' tools won't beat us in Korea, because we hard-code Korean-system context: tax cycles, immigration timelines, KakaoTalk etiquette, drug interactions.

Roadmap (next 90 days)

Calendar export · Korean reply drafter · Backend proxy (no BYOK) · History · B2B dashboard

There are 2.7 million foreigners in Korea.

Every one of them gets a letter like this.

Jumeoni handles it for them.
